RE: The Global Warming Potential of Kingspan Products

Dear Barbara

Further to your correspondence with this office we would like to confirm the following:

Our Kingspan **Kooltherm** (Phenolic) and **Therma** (PIR) range of insulation boards manufactured in the UK and Ireland are both free from HCFC's and CFC's with zero Ozone Depletion Potential (ODP). The blowing agent (cyclo-pentane) used in our Kooltherm and Therma range has a global Warming Potential of 3.

We have enclosed a CECED document, which is self explanatory, and in which the reference to the GWP of cyclo-pentane is made.

We trust that the foregoing information is of assistance and in the event of any further queries please do not hesitate to contact our Technical Advisors direct on 0870 850 8333.

*Yours sincerely
For Kingspan Insulation Ltd*
